(lau.u3d)

A little example of an embedded U3D object in a pdf. The object is a simplified version of a 3D scanned mesh of a Ippolita Sforza's statue sculptured by Francesco Laurana. This pdf was produced with open source tools. The object was converted in the pdf-ready U3D format with MeshLab (http://meshlab.sourceforge.net) and assembled in a pdf with pdfLATEX and the movie15 package.
